No, we do not do this as part of our everyday process, but we do so on a server **when we can.**

If this were done as part of the iTC back end, it would solve the problem.

Phillip -

Does your team scan apps with .exe's as they come through?

Thanks,

Peter

Hi Peter,

Ape Review currently does take apps that we detect as having .exe's and .dll's (excluding those made with Unity or Monotouch) and scan with Norton iAntiVirus and ClamXAV. Its similar to what we would implement.
I set up some time so I can better understand your requested timing, and I can give you more information about how our planning/scheduling process works.

Thanks,
Cindy

Cindy -

Thanks for getting back to me. We have been talking to Phillip Shoemaker regarding the App review process. There are a number of changes that need to be made to better secure that space going forward. However, from what I understand, you all are the first time that the App is brought into Apple. Scanning it at that point makes the most sense. We need to get this prioritized and implemented sooner rather than later. I would anticipate that this is be completed by the end of March or April at the latest. Should we set up a meeting with Tracy to prioritize this?

Thanks,

Peter

Hi Peter,

I'm checking with App Review to see what they do for detecting Malware as part of review (should have more info next week, the main person for this is OOO this week). We also surface .exe and .dll files that we find in the app.

Re: getting the radar scheduled, we'll revisit again when we do our next round of planning in a month. I agree this is important and something we do want to do - we've got other project work going on right now for summer/fall commitments, but feel free to check in with me again on this.

Thanks,
Cindy

There is a radar for this, but we don't currently have a timeline for when this will be done (hasn't really been an issue for the app store).
